

**SATURDAY, MARCH 7, 2015
9 AM – 4 PM at MESA COMMUNITY COLLEGE
KEYNOTE SPEAKER:**

Dr. Jim Bell, Planetary Scientist, Arizona State University

SpaceUp Phoenix is a one-day interactive un-conference on the topic of space exploration and development. This will be a “meet-up” type of event where all attendees are invited to give a demo, present a talk, or participate in a panel or roundtable. No real expertise is needed, as you can simply pose a question to start a discussion. There will be no detailed agenda in advance, as presenters fill out a program schedule spontaneously at the event. Think of it as a “pot luck” conference where everyone brings something to share. Registration is \$5 and covers materials and light refreshments.

Experts in the field of space science, exploration, and development will be invited to make presentations but all visitors are welcome to talk about their favorite subject in this area. It is an informal, fun, environment and everyone interested in space exploration is encouraged to attend.

The event will be held at the Physical Sciences building (Planetarium building) on the campus of Mesa Community College (MCC) just north of highway US60 on Dobson Road. If you cannot stay the entire day, that’s fine, as the format is very informal. Preregistration via our website is encouraged so we can plan accordingly.

Sponsored by

Mesa Community College

Phoenix Section of the American Institute of Aeronautics and Astronautics

Phoenix Chapter of the National Space Society

Phoenix Chapter of the Moon Society
